

Is a nation's physician density associated with its GDP, when controlling for health expenditure?

Data from WorldBank.com (2022)

Physicians per 1000 people

Log GDP
(GDP in USD)

Log Health Expenditure
(Expenditure in USD)

$$\text{The Model: } \text{LogGDP} = \beta_0 + \beta_1 (\text{Physicians}) + \beta_2 (\text{LogHealthExpenditure}) + \epsilon$$

Several Outliers

Heteroscedastic

	coef	std err	z	P> z	[0.025	0.975]
Intercept	20.1455	0.833	24.187	0.000	18.513	21.778
Q('Physicians (per 1,000 people)')	-0.2341	0.189	-1.239	0.215	-0.605	0.136
Q('Log HealthExp')	0.8704	0.197	4.414	0.000	0.484	1.257

1. A 1% increase in Health Expenditure **is associated** with a 0.87% increase in GDP.
2. Physician density **is not a significant predictor** of GDP when controlling for health expenditure (p=0.215).
