

Higher GDP, longer lives

2023 World Bank data, 203 countries

Each dot is a country; the line is the fitted OLS relationship.

The relationship is strong and significant

Main model: Life expectancy = $\beta_0 + \beta_1 \log(\text{GDP per capita}) + \varepsilon$

+4.14 years

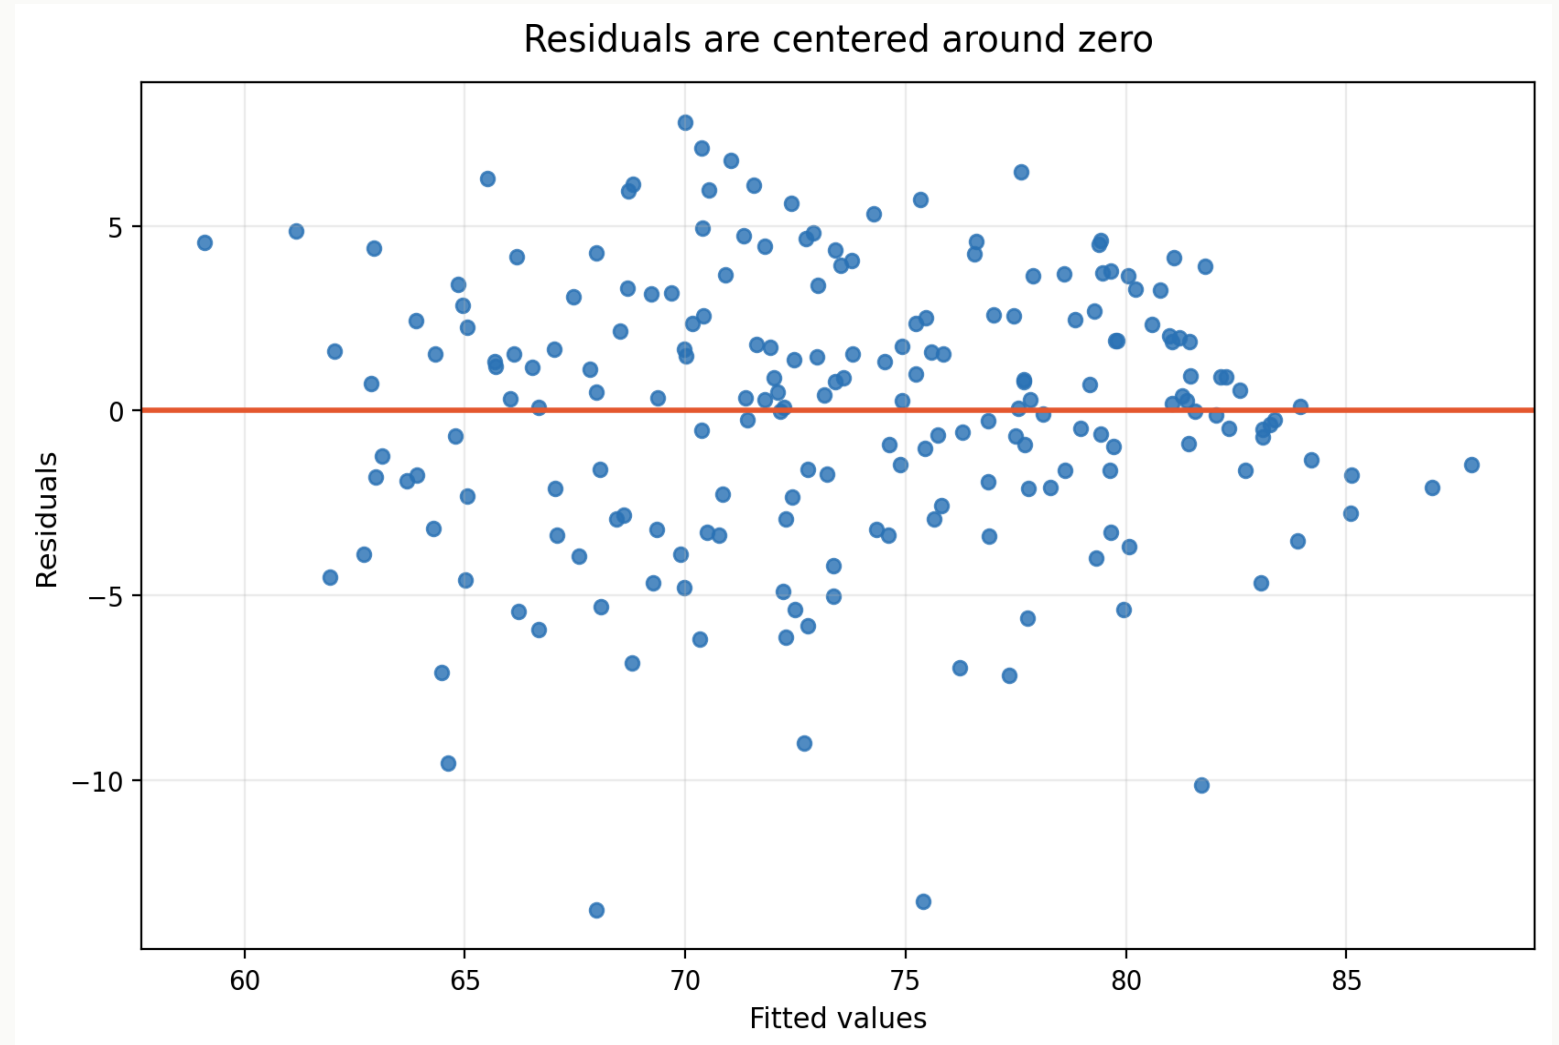

per 1-unit increase in log GDP

$R^2 = 0.731$

model explains about 73% of variation

$p < 0.001$

statistically significant relationship

Association, not proof of causation.
