

Are countries with more education spending happier?

Log GDP to
linearize the
relationship

Positive correlation
between GDP per
capita and
Happiness Score.

Results

For 1% increase in GDP allocated to education, the national happiness score is predicted to increase by 0.1917 points

$$\text{Happiness Score} = B_0 + B_1 (\text{GDP Spent on Education}) + B_2 (\text{GDP per capita}) + \varepsilon$$
