BUS RIDERSHIP AND POGOH BIKE USAGE

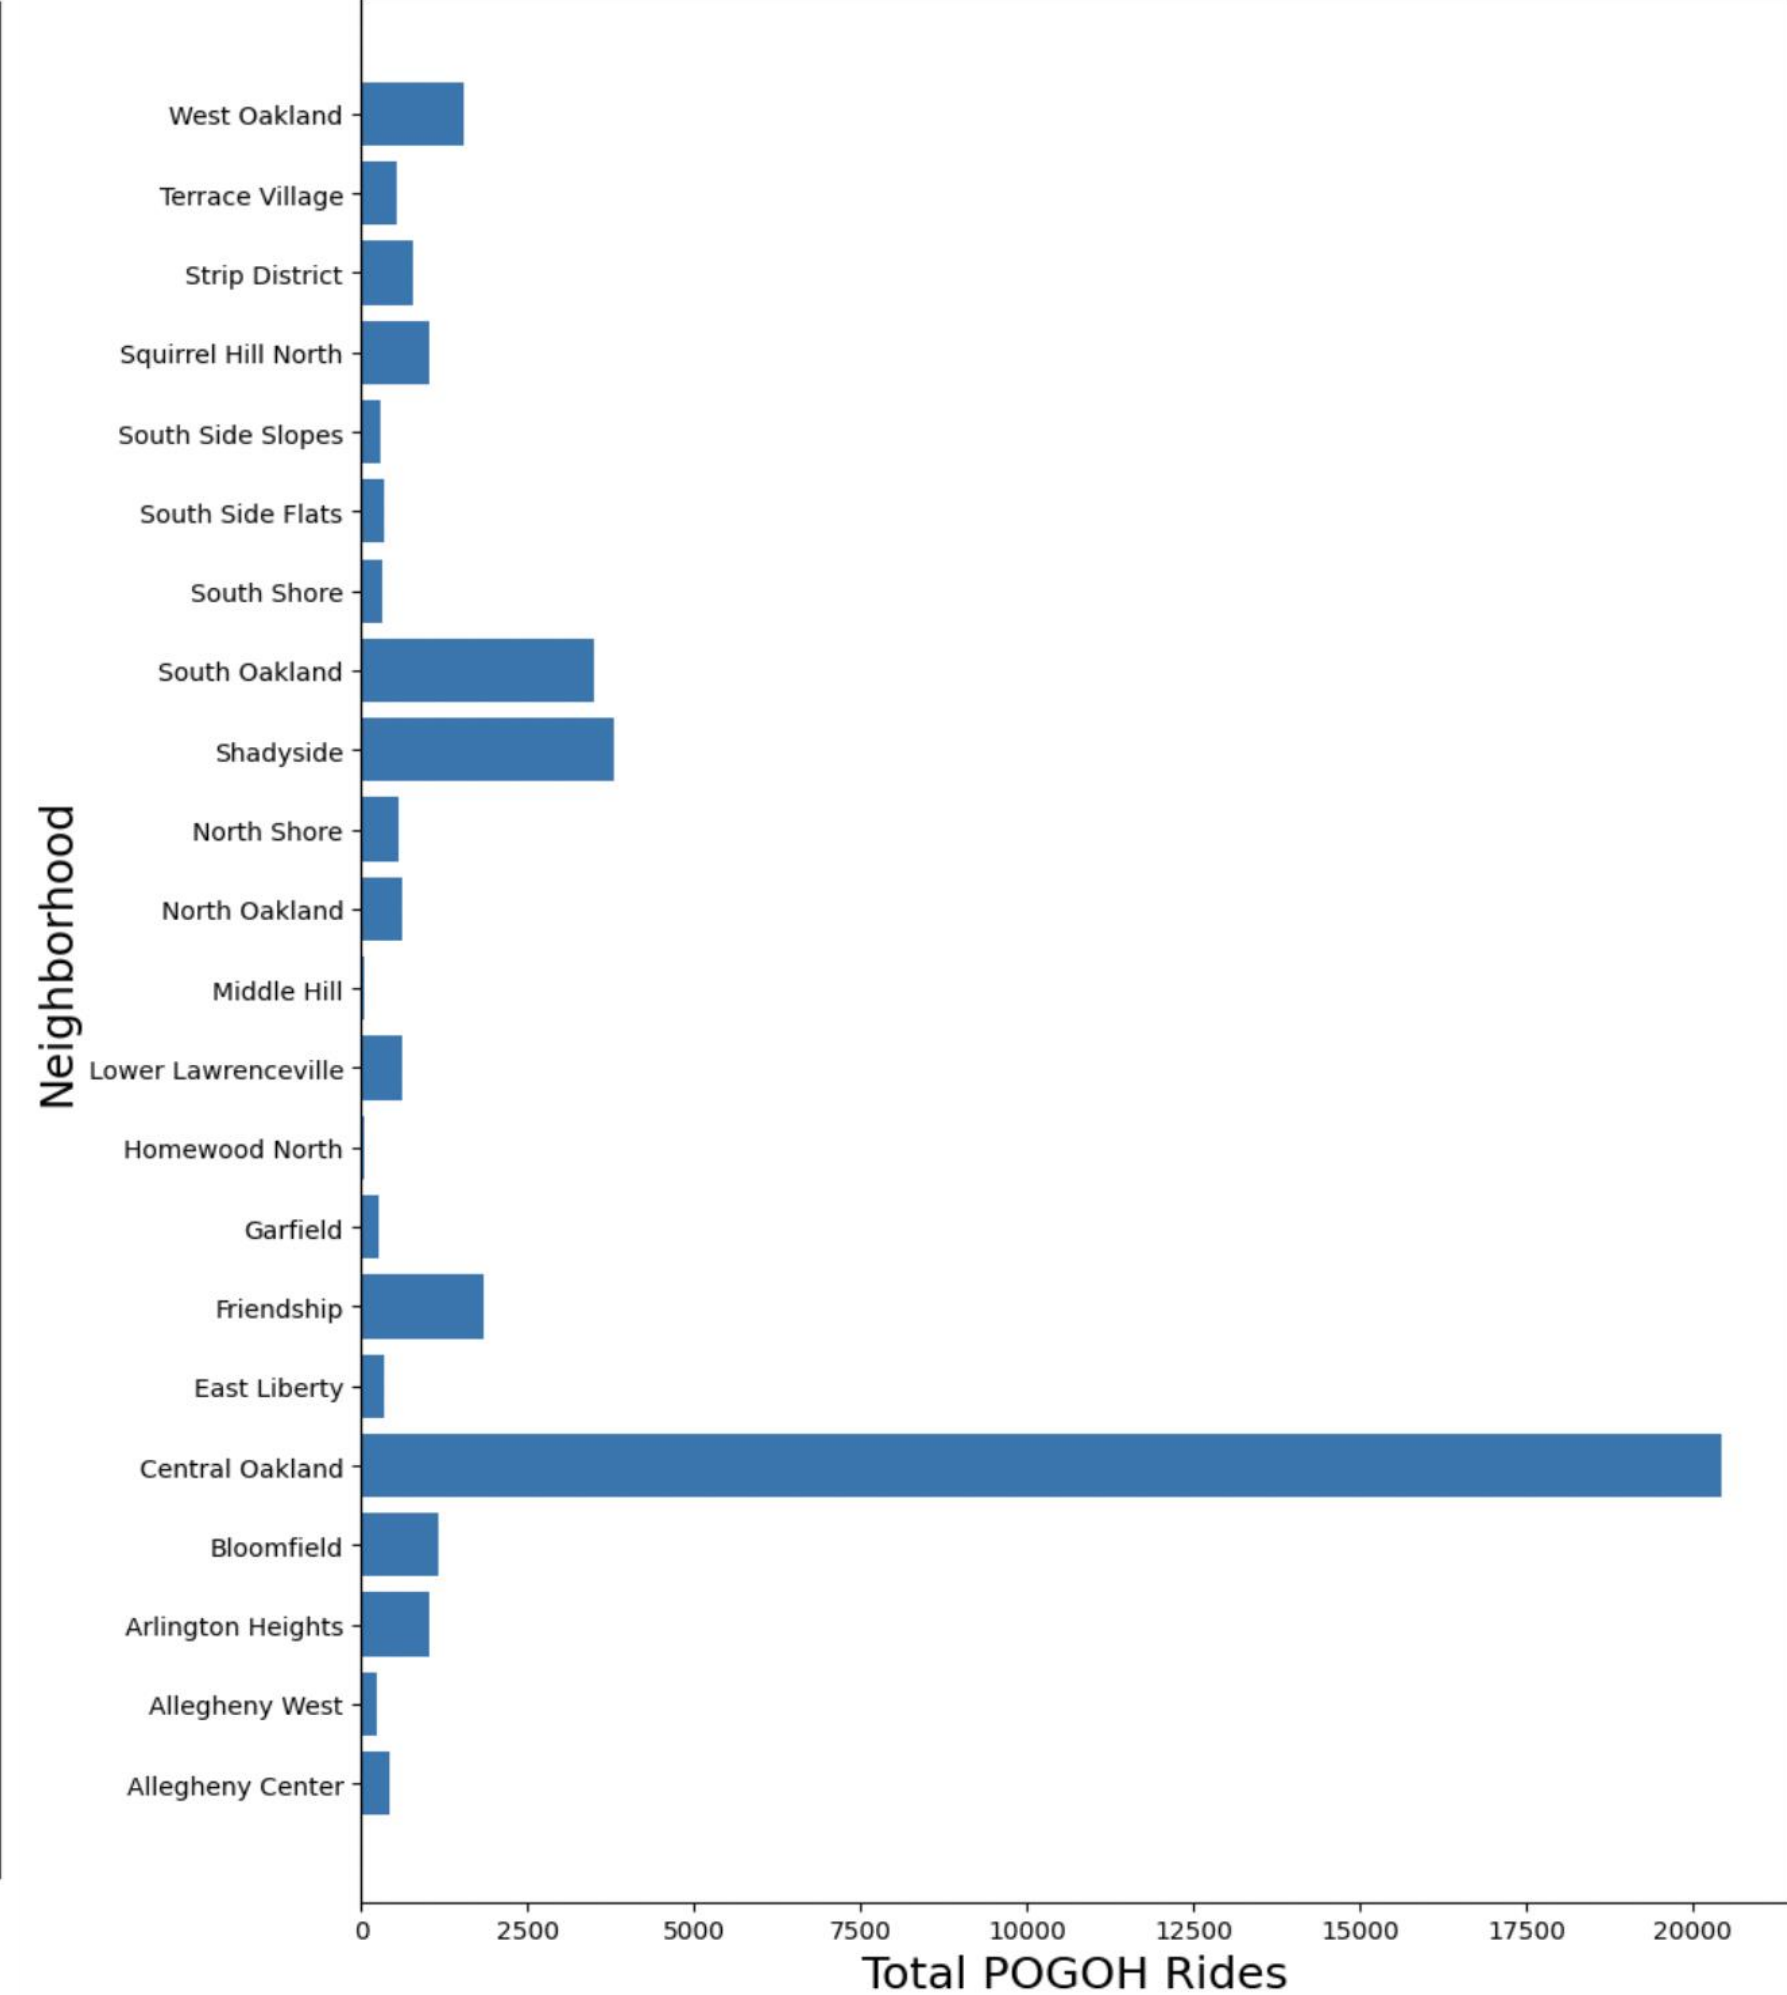

Do neighborhoods with higher POGO bike-share usage also have higher bus ridership, or do these transportation systems serve different populations rather than acting as complements?

Bus Ridership by Neighborhood

POGOH Rides by Neighborhood

RESULTS

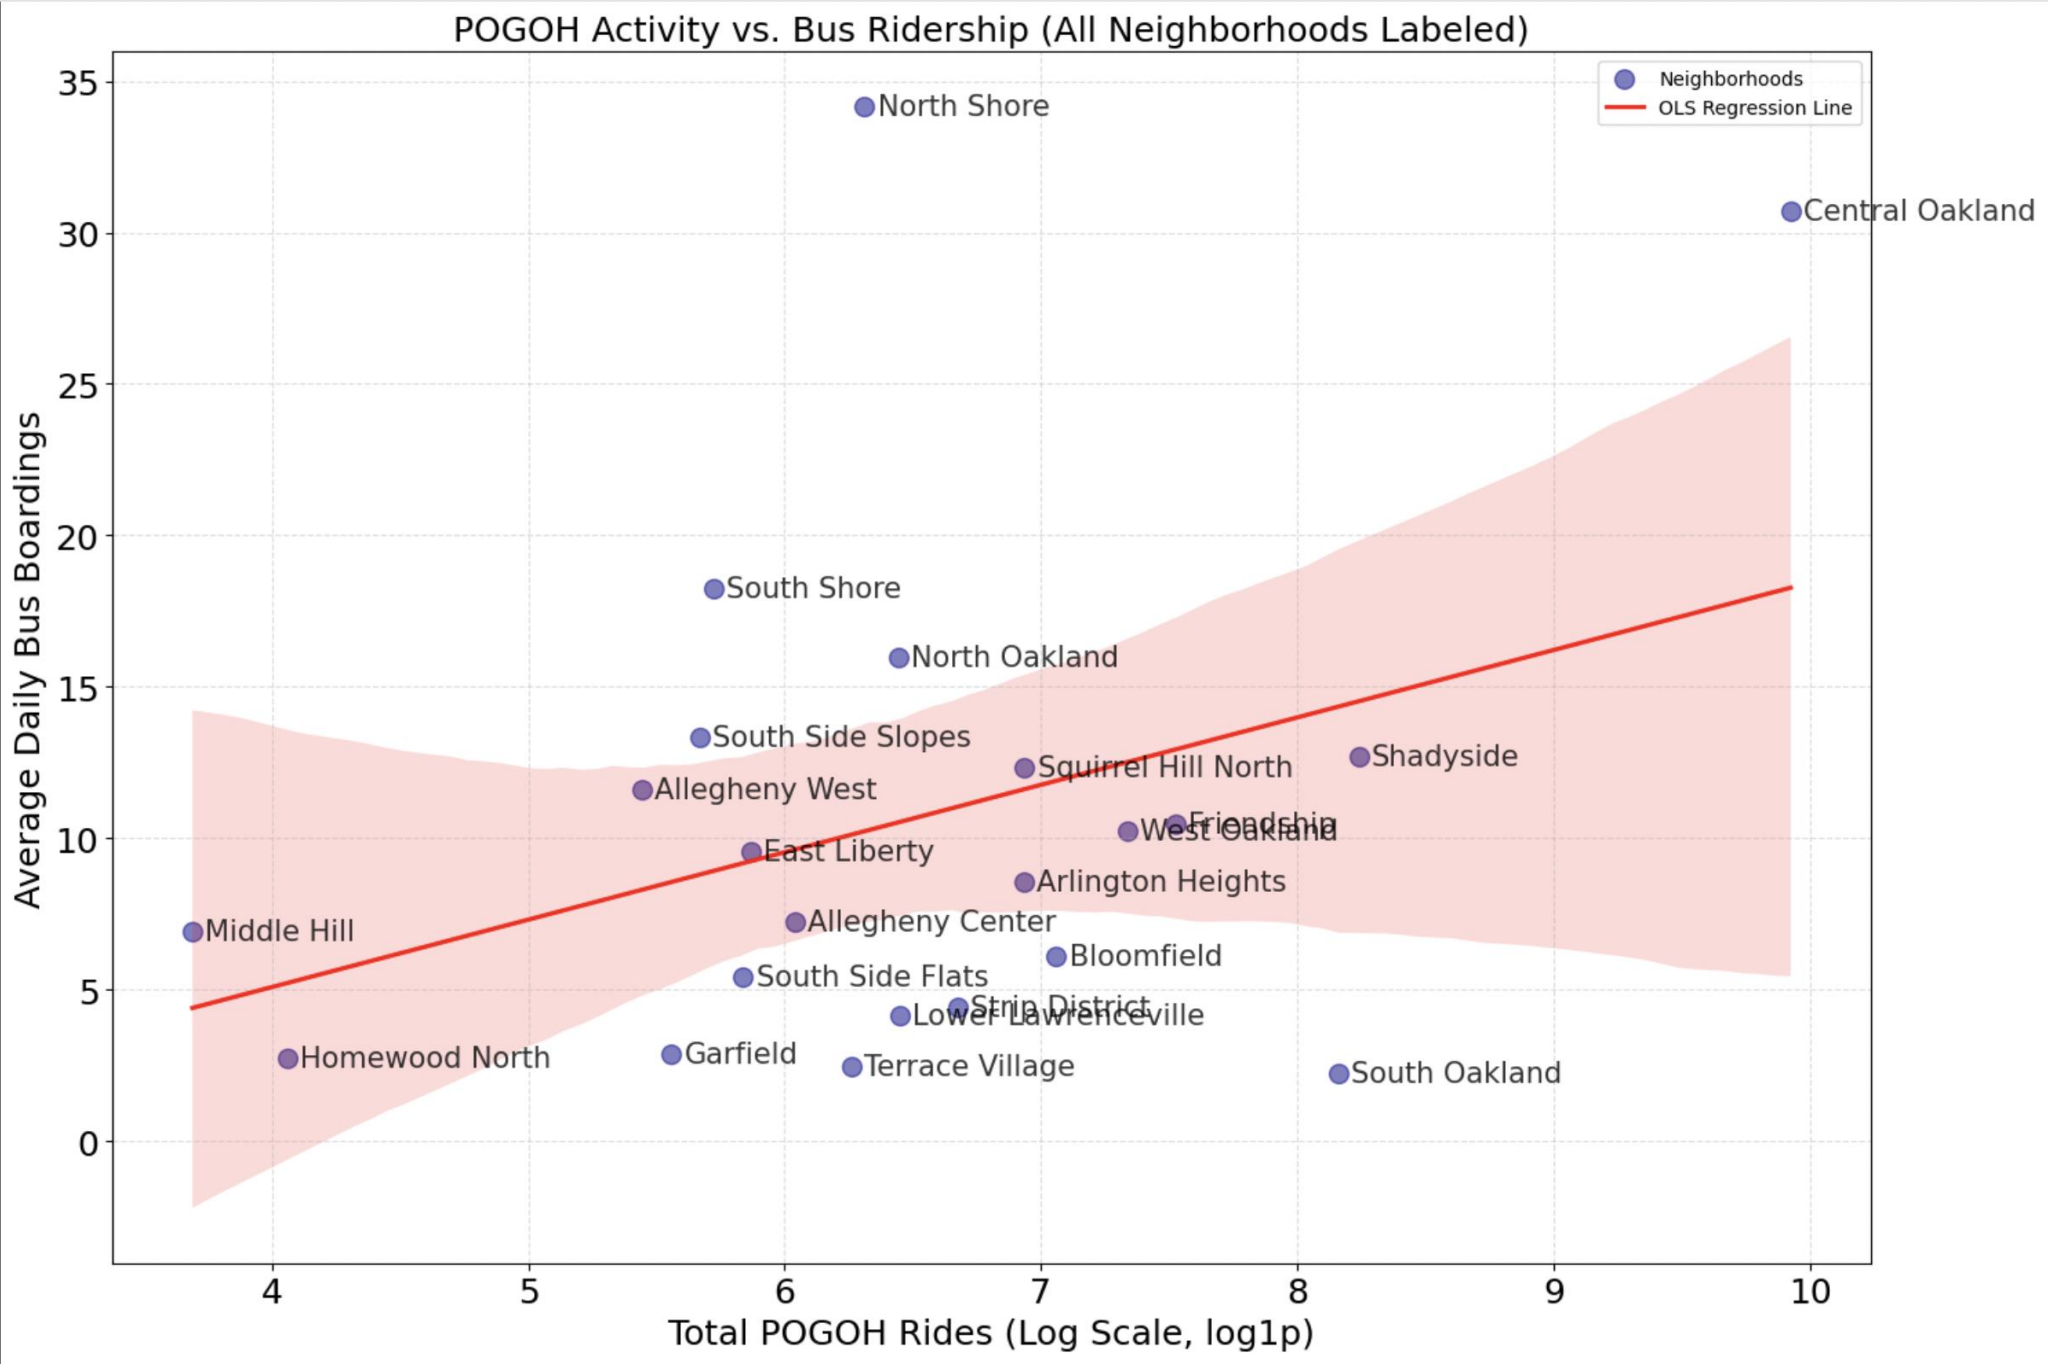

There is no strong evidence that bike usage and bus ridership are correlated.

Statistical Model:

- Level-Log general linear model

Violations of OLS assumptions:

- Omitted variable bias
- Data inconsistency
- Heteroskedasticity
- Low model fit

$$\text{Average Bus Boardings} = \beta_0 + \beta_1 \ln(\text{Total POGO Rides}) + e$$

	coef	std err	t	P> t	[0.025	0.975]
const	-3.8214	8.554	-0.447	0.660	-21.665	14.022
log_pogoh_rides	2.2257	1.297	1.716	0.102	-0.480	4.932
